

Grade 4 (3rd Gen) – Obj. 25B: Solve extended statistical problems.

Name _____ Date _____

The grocery store manager is deciding where to put boxes of cereal that just arrived in 4 trucks. The chart shows the number of boxes of cereal in each truck.

Truck A	Truck B	Truck C	Truck D
66	75	35	60

There are 4 empty shelves in the back room, and each shelf holds only 60 boxes of cereal. The store manager needs to decide how many boxes of cereal should go on each shelf so the boxes will all fit.

In the space below, show how many boxes should be moved from the trucks to the shelves so the boxes can fit on 4 shelves. Explain how you got your answer.
